TRAFFIC COUNT REPORT

MAY 2004

**Approved by: Donald E. Lopic, PE. Assistant County Engineer
Prepared by: Carlos A. Costales, Senior Engineering Technician**

Traffic Counting Program

Vehicular traffic volumes are the key indicator of facility use, and are used to provide information for programming and designing roadway and traffic improvements. The County gathers volume information from single day counts on weekdays in the spring of each year, at a moderately high volume season intended to represent a design volume (ideally, the 100th high hour of the year). Additional multi-day counts are obtained at some of these locations during the summer and fall. Most volumes provided in this report are calculated from time stamped twin-tube axle “hits”, taken by direction, and adjusted for trucks. The counts are validated internally, and checked by direction and comparison with previous recent counts for reasonableness. Previous studies have shown that, with the care taken as described, the various seasonal adjustment factors normally assigned are not generally significant for Osceola County roads. Be aware that the volumes given are one day counts, and are subject to variations due to weather, shifts in tourist or snowbird season, special events, roadway conditions and other seemingly random fluctuations, and variations of up to 10% about a mean should be anticipated.

The county maintains 200 count stations. These stations are categorized into five areas of the County, plus stations maintained on State highways (US 192, US 17-92 and SR 535). In addition, counts within the cities of Kissimmee and St. Cloud are included.

The County count information is provided in the following manner. First, the tables provide 24 hour bi-directional vehicular volumes for each location, with historical volumes for the last six years, so that short term trends can be seen. Second, the tables provide the following details for this year’s counts: the P.M. peak hour volume, the directional split during the peak hour (“D”), the peak hour volume divided by the daily volume, (approximates the “K” factor), and the count date. Finally, a map of the roadways in northwest Osceola County with this year’s daily volumes is provided.

Additional information on state roads (I-4, Turnpike, US 192, US 17-92) is available from the Florida Department of Transportation. Their current count data is available at <http://www.dot.state.fl.us/planning/statistics/trafficdata/default.htm>
